

EDUCATION AND OUTREACH

ARM scientists study clouds and radiation to better understand climate change.

The ARM Climate Research Facility (ACRF) Education and Outreach Program supports the U.S. Department of Energy's premier climate change program. Their goal is to educate students and communities about climate change.

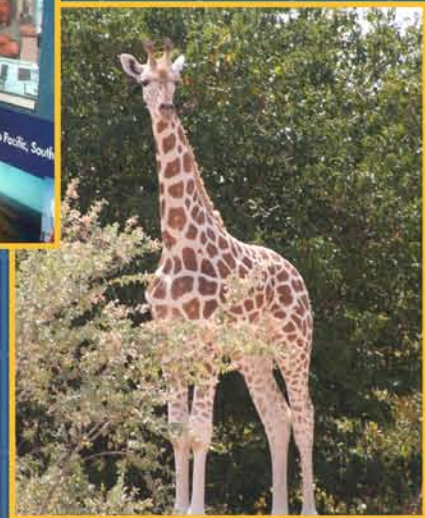

Learning tools provided by ACRF Education and Outreach include interactive kiosks, teaching materials, newsletters, and an educational website, complete with activities, lesson plans, and more, available at <http://education.arm.gov>.

The ARM Climate Research Facility operates three fixed sites around the world, plus aircraft and a mobile research facility.

Kiosks present climate observations from both scientists and community members.

The ARM Climate Research Facility has a mobile facility that travels across the globe. It just spent a year in Africa!
